

Design and Technology

Vision Statement

The Design and Technology Department is committed to planning, developing and delivering programmes which provides students with the broadest possible range of opportunities; at the heart of this is the desire to deliver a curriculum which has creativity at its core.

Students are engaged in the analysis and solving of design problems which lead to the production of high quality solutions; this is achieved through imaginative teaching, thinking and learning that embraces new technologies whilst retaining the best of traditional practices.

Above all we aim to encourage a caring and innovative environment which allows students to investigate and experiment in a safe, supportive and positive atmosphere, enabling all students to reach their full potential.

Aims

To enable students to combine their designing and making skills with knowledge and understanding in order to design, make and evaluate high quality products.

To establish a learning environment which is focussed on learning where students feel supported, safe and secure.

To value the work of all students, using assessment as a means to enhance learning, monitor student progress, and to form a basis for meeting each student's individual needs.
